

CLASSIC GUPPY • PUNE

Your Guppies Have Arrived

Set the tank up a day early. Then give them one full hour to come in slowly.

ONE DAY BEFORE — GET THE WATER READY

Age the water 24 hours

Fill the tank and leave it standing overnight so the chlorine escapes. In a hurry, use a dechlorinator and wait one hour.

Run the filter overnight

Sponge filter and air pump switched on for a full day before the fish come. Never put them into a bare tank on day one.

THE FIRST HOUR — ACCLIMATION, DO NOT RUSH

0 MIN

Float the sealed bag

Lights off. Let the bag float for 20 minutes so the temperature matches.

20 MIN

Open and add water

Open the bag and add half a cup of your tank water into it.

30-50 MIN

Repeat every 10 minutes

Another half cup each time. Three more rounds.

60 MIN

Net them across

Net the fish into the tank. Throw the bag water away, never pour it in.

REST OF DAY

Lights off, no food

Feed the next morning. One day without food will not harm them.

EVERY WEEK AFTER

30%

Change 30 percent of the water, once a week

Always 30 percent, and always at the same temperature as the tank.
